## Technology Instruction Page

1. Set up a time with a buddy class and plan with the teacher to create a technology project between the two classes.
  2. This project should be something that enhances the curriculum and is tied to current lesson plans.
  3. This should be formatted to where students in an older class help and teach students from a younger class how to make a project. This could be taking pictures with cameras or IOS devices and then compiling them into a scrapbook to tell a story, creating booktrailers, making fotobabbles to describe pictures, etc.
  4. The classes will meet a minimum of three times to complete the project.

## Documentation Page

I have successfully collaborated with another teacher from another grade level using our classes to buddy up and learn from each other. I have attached a copy of the description of the events including the teacher's name, grade, the dates that the collaborations between the two classes took place, and a description of the lesson (with TEKS) along with my evaluation of how the lesson went and the usefulness of the collaboration.
